

TRE - TRE MATIC

TRE is a fast and precise automatic transplanting machine for square soil blocks 3x3e/o 4x4 e/o 5x5. The plant's feeding system is equipped with belts and with a pneumatic device, which separates the soil blocks and bed them out, even if the plants have long and tangled leaves. TRE is equipped with two independent frames, assembled together with a parallelogram system: the one internal frame supports the transplanting elements and the external one is mounted on 4 wheels. The machine does not allow to mulch. TRE is the version towed by a tractor and the TRE-MATIC model is a self-propelled hydrostatic drive machine, equipped with automatic pilot.
